

At 288 metres, 22 Bishopsgate is another of the City's tallest buildings – and one with the deepest foundations at 65 metres! But it's not all about offices. The architects designed the building to improve the everyday experience for the public as well as the office workers, with art, craft, high ceilings and lots of fresh air. And its 23 sided, faceted glass body is shaped to respect the townscape views.

**End
Sky Garden**

The Sky Garden is the highest public park in London with an outside roof terrace and a 360° panorama of London. A great place to relax after a long walk – which is great timing!

22 Bishopsgate

At Broadgate Plaza, you'll spot Broadgate Tower. That 35 storey tower is on top of Liverpool Street station and the train tracks! Designed by Skidmore, Owing and Merrill, the building rests on a horizontal raft that spans the tracks. Because of this, it has to be light as a feather and was built using mainly steel and glass!

**Broadgate
Plaza**

The Plaza is a light-filled avenue with steel struts crisscrossing the glass façade give the buildings a rigorous, expressive quality.

**Heron
Tower**

Visiting the Sky Garden? What plants do you spot?

London's skyline is always changing. Draw a skyscraper of the future below!

Just 50 years ago the idea of skyscrapers in London was quite unheard of. London's built on clay that's so much softer than the rocky ground of American cities like Manhattan. To give buildings stability, they need deep – very deep foundations, which you can sometimes see when construction is underway!
