

# AQUANAUTS

## Climate Change Art Project

This is a creative project to illustrate the impact of climate change on water flow, including increased flooding and droughts, while raising awareness about its effects.

### Steps

1. Paint a river scene showing how climate change affects water flow (e.g., flooding, drought).
2. Add captions or speech bubbles explaining the changes.

### You will need

- Paper, paint, and markers
- Photos or drawings of rivers and floods

### Helpful tip

Use glitter to represent water effects
